Advanced Medical Recordstm

TRUSTED – PROVEN – RELIABLE – 100% HIPAA COMPLIANT

Why Outsource Your Release of Information?

The Release-of Information (ROI) process is a time-consuming and heavy administrative burden on health information management professionals. In addition, new HIPAA regulations add more labor to the process, making ROI more problematic for facility staff.

Let **ADVANCED MEDICAL RECORDS's** experienced, well-trained, professional staff relieve your administrative responsibility by outsourcing your ROI needs. **AMR** offers onsite ROI services to rapidly and accurately capture and transfer requested patient information using the most secure HIPAA compliant technology available today. Review our services at www.advancedmedrec.com.

What are the benefits of outsourcing your ROI services?

- ✦ Better control of the ROI process
- ✦ Elimination of reproduction/mailling costs and associated staff distractions
- ✦ Enhanced requestor relations
- ✦ A detailed, simple to use logging/tracking system for both the facility and the requestor
- ✦ Reduced in-bound record status calls
- ✦ HIPAA Compliance
 - ✦ Workflow designed such that staff can ensure current authorization language is included in each request letter and authorization
 - ✦ User access is controlled by patented PIN number "Right2View" technology

Quality Assurance Program

Our Total Quality Management Program provides for thorough and ongoing analysis of our performance at each facility. The TQM program was designed by credentialed **AMR** staff in conjunction with HIPAA, CMS, JCAHO and clinical practice guides.

AMR is the world's largest digital document repository of medical and healthcare institution reports and patient files. **AMR's** unique PIN number access for **3D** Logon security and our patented "**Right2View**" document encryption technology are the foundation for a 100% HIPAA compliant ROI solution. PIN number protection is trusted by financial institutions and their consumers to conduct millions of secure bank ATM transactions daily. **AMR's** healthcare process knowledge and patented technology is the reason why **AMR** is the preferred choice for digital document management for major institutions such as:

How Does It Work?

The ROI Capture Process

All ROI patient file scanning is performed, onsite, at the Provider's facility. The notebook computer and companion high speed scanner occupy a desktop space that is smaller than most office copiers. The patient files are scanned and stored onto PIN number encrypted USB storage devices to protect the contents and insure patient file segregation by Physician. The scanned images are electronically transmitted to the AMR data center for online posting, indexing and five (5) step quality control processing.
